

Nov 26, 2006

**Letter of Appreciation to  
Sask-Pro machine works Ltd.**

The installation of a major hoisting system was completed at Mosaic K2 mine site in 2006. The Mosaic installation was completed by a team of dedicated tradespersons and professionals. The complete new hoisting system, which includes state of the art electronic control and drive systems by ABB Canada Inc. to control the largest Asynchronous, AC motor in the global mining industry, was successfully installed thanks to people like yourself.

Despite the best made plans, projects sometimes develop issues that require the intervention of expertise beyond that which is available on site.

Sask-Pro Machine works ltd. came to our rescue on just such occasions. Your expertise in machining on the hoist brake systems and subsequent work on the hydraulic pressure rings for the idle sheave wheel bearings allowed the project to continue on schedule.

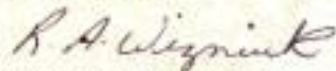

The swiftness of response to our requests to attend at site to assess the situation as well as the ability to furnish professional manpower for weekend work was appreciated by ABB, MPRI and Mosaic. To respond with full complement of equipment and manpower within a few hours of my request for such a large job was phenomenal.

The machining at Mosaic K2 Mine site coupled with the work completed at your Sask-Pro Machine facility in Esterhazy demonstrated the quality and precision that is only provided by a first rate firm.

I wish to personally thank you and your team of professionals for the quality of work done at my request over the past summer. It was a pleasure doing business with a firm that responds to the needs of Industry as well as yours does. I will definitely be passing my assessment of your abilities on to others that may need your services.

Keep up the good work! Tyler.

Best regards

Richard A Wizniuk
